COURSE INFORMATION

This one day course provides a combination of lectures, scanning demonstrations and workshops to give a useful introduction to in-situ scanning opportunities that can be undertaken by GPs and other medical professionals to improve diagnosis time.

Who should attend this course?

It is aimed specifically for GPs and medical professionals who are new to the field and have little/ no scanning experience.

Structure

The initial lectures and associated workshop will cover the three main ultrasound modalities, where the emphasis will be on familiarisation and manipulating equipment controls to optimise image and signal quality.

Our top faculty will then introduce their specialisms, answer any questions and provide supervised individual scanning guidance in small groups.

Practical 'hands-on' workshop sessions

The workshops are an ideal opportunity for the delegates to gain supervised training and practical experience on live models. An exhibition of the latest ultrasound systems is also provided in the workshop where delegates can practice on a range of machines and gain insight into the different options available.

Venue and accomodation

[Hallmark Strathallen Hotel, Birmingham, UK](#). We have negotiated reduced room rates for delegates. Please contact T: +44 (0)330 028 3410 and mention the course.

PROVISIONAL SCIENTIFIC PROGRAMME

AM: Ultrasound equipment controls and optimizing image quality

Basic principles of ultrasound imaging

Pulsed Doppler/colour Doppler techniques

Image optimisation

Practical Workshop Session I: Equipment controls

Abdominal aortic aneurysms

Vascular - DVT investigations

LUNCH

PM: Specialities and workshops

Practical Workshop Session II: Abdominal and DVT

Intro to emergency medicine FAST imaging

Musculoskeletal topics

Practical Workshop Session II: FAST and MSK

MEETING CLOSE
